MailServe – Effective, Efficient, Intelligent

- How is it going to help me?

- What does it do?

- Who else is using it?

MailServe

How Is It Going To Help Me?

Find out why over 50,000 users are using MailServe to manage their email across locations. Confidently. Since 1999.

MailServe – Effective, Efficient, Intelligent

Reliable

99.7% uptime backed with watertight SLAs. World-class filtering technology for malware and junk blocking.

Highly Effective

Extensive control panel with a wide range of MIS reports to ensure that email is used productively in your organization. Filter the mail that gets delivered to your mobile devices.

Productivity

Outstanding Support

Central Helpdesk and physical presence in 7-locations across the country.

Secure

Geographically distributed architecture; Robust access security with extensive event logging.

Complete Device - Independence

Access your mail from any device, as your mail stays in sync across all devices – including Sent Mail.
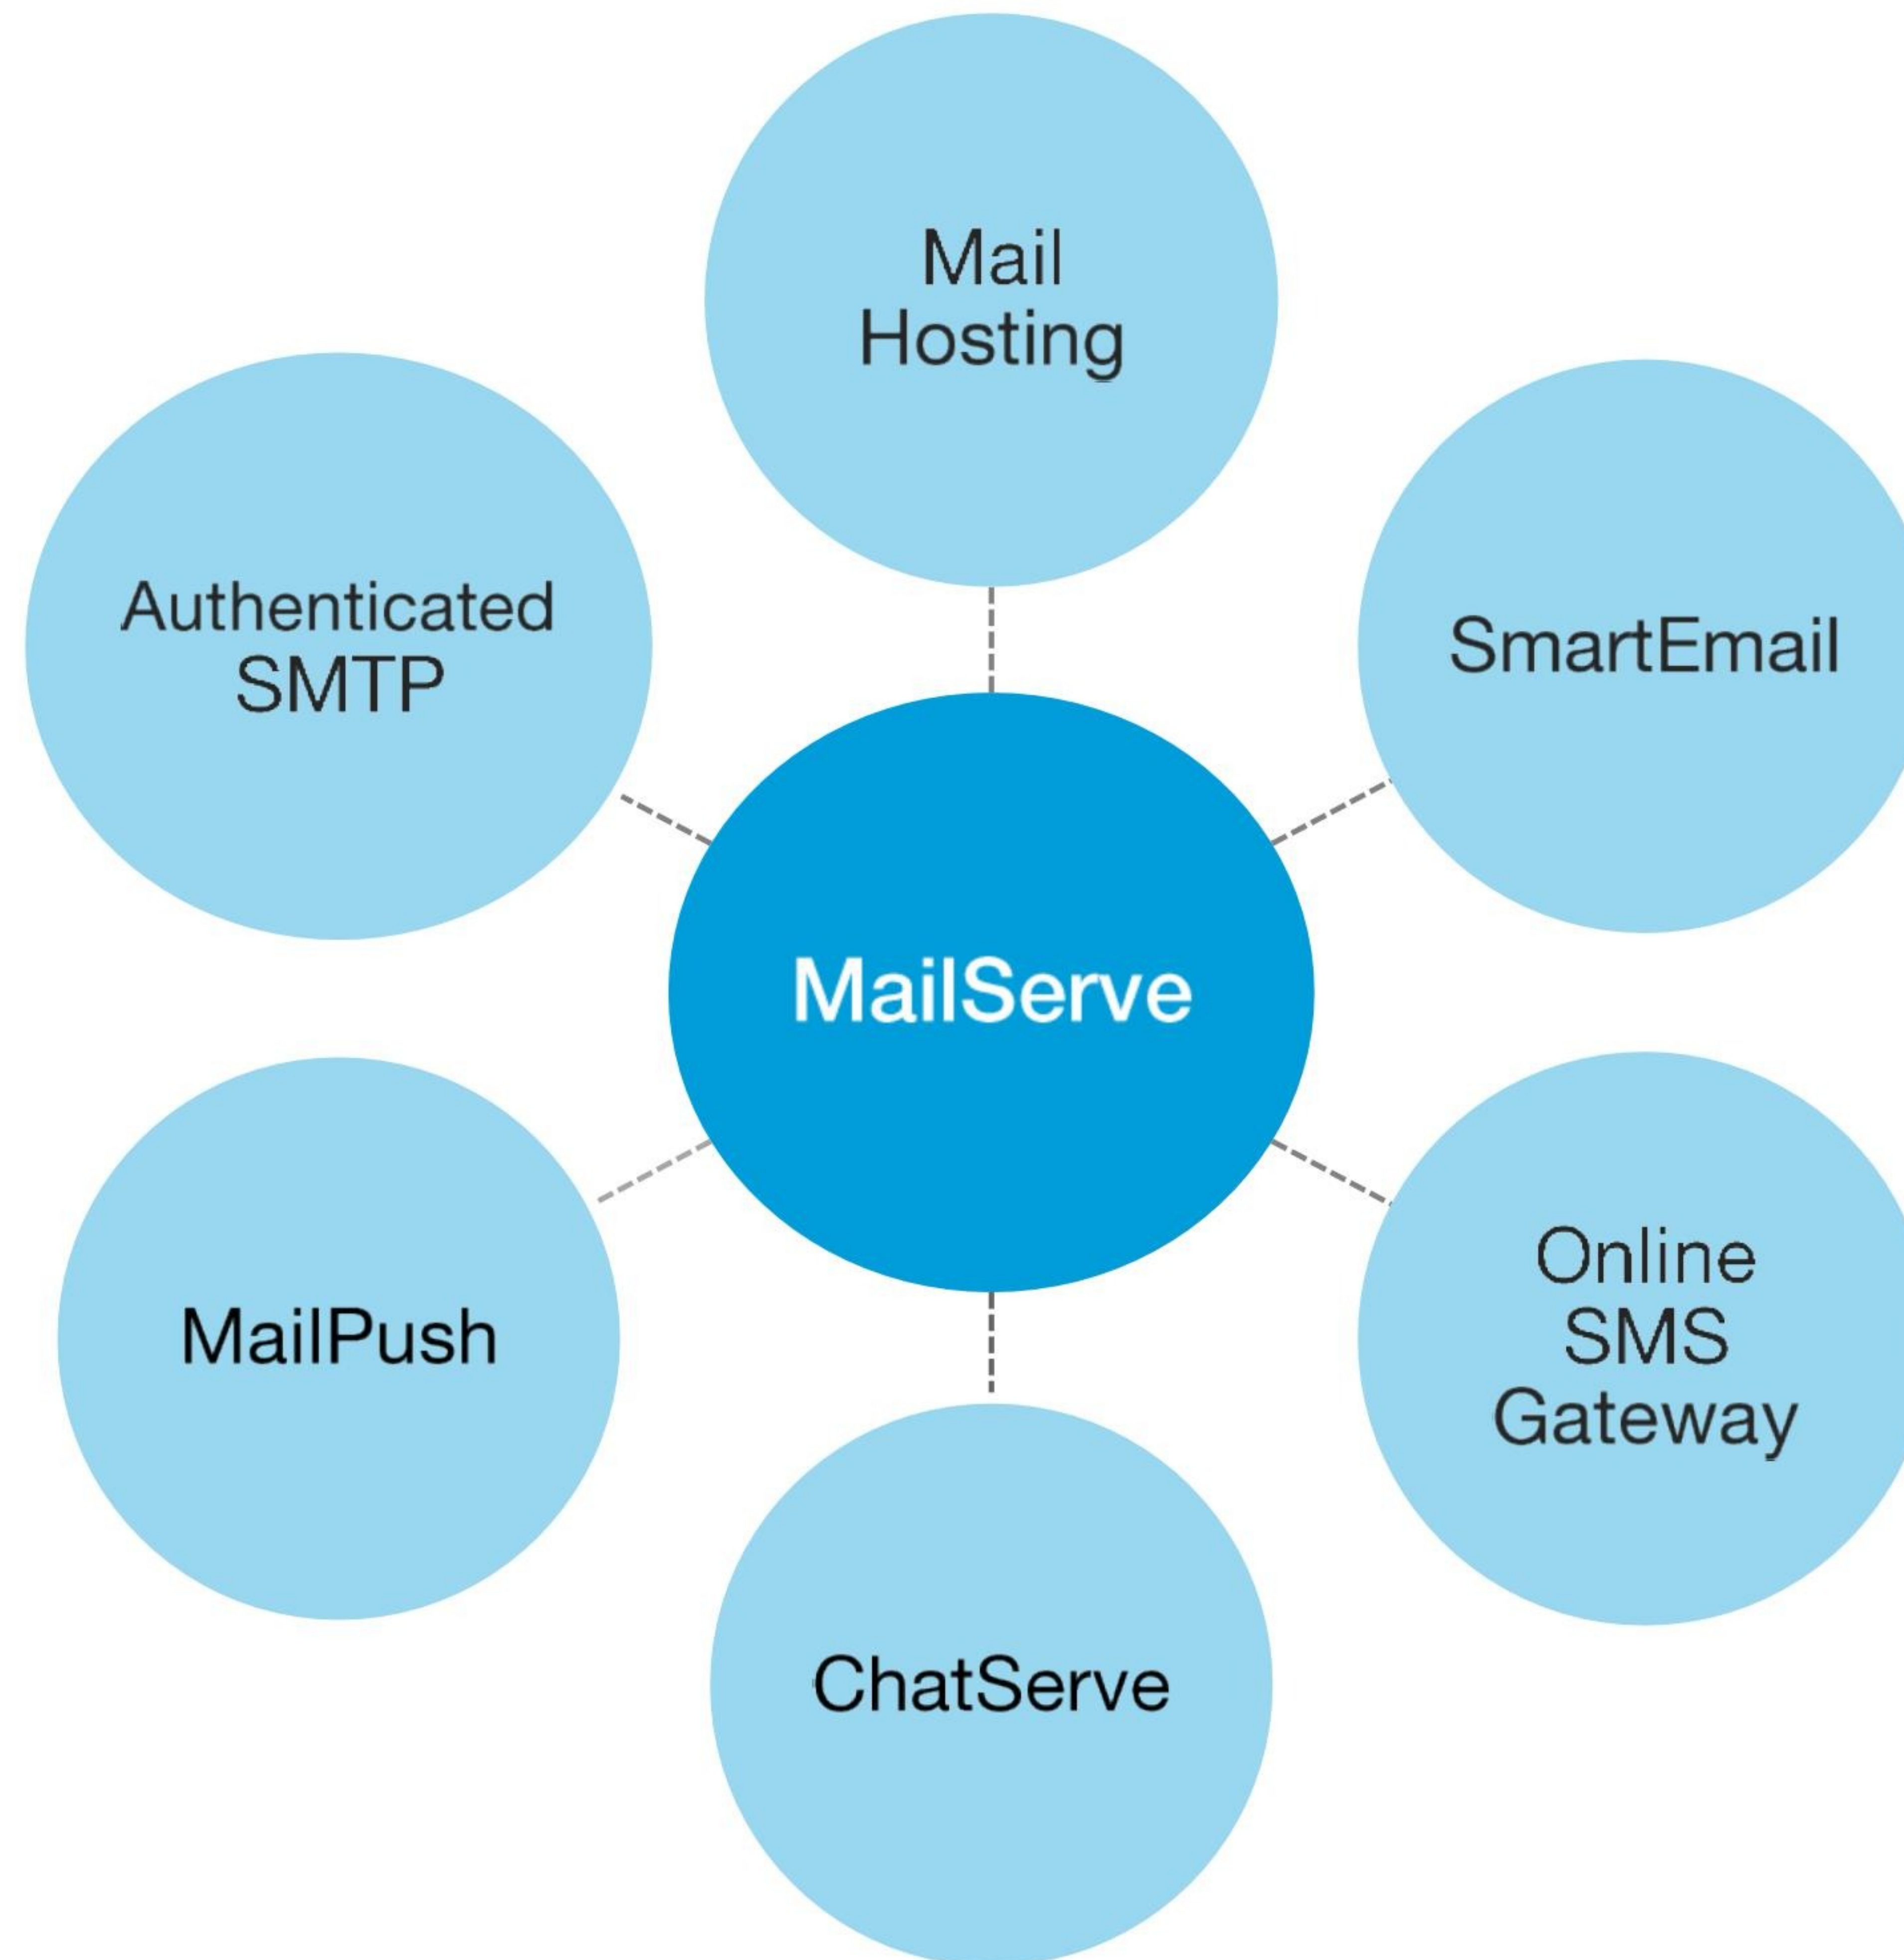

MailServe

So What?

- Your email stays in complete sync across all your devices – laptops, tablets, IOS & Android smartphones, Web mail, etc. including messages sent out from any of these!

- Powerful filtering for smartphones, to ensure that you can decide what mail should get delivered to your smartphone.

- A feature-rich Web mail interface, should you wish to stop using an email client on your desktop.

- Best-in-class infrastructure located at Tier III data-centers to ensure your email is available to you from anywhere, at any time.

- No installation, configuration – so zero-maintenance overheads.

- And for unlikely situations, a recognized, appreciated help and support system.

MailServe

What It Does?

Few of the features that our customers really appreciate

MailServe Components

MailServe

- Mail Hosting
- SmartEmail
- Online SMS Gateway
- ChatServe
- MailPush
- Authenticated SMTP

MailServe

Mail Hosting

- Mail Hosting is the foundation of MailServe, with a powerful browser-based control panel, and world-class Anti-virus and Anti-spam filtering.

- MailServe provides administrators with a powerful set of controls to manage every aspect of the mail-flow within the system.

- Users get a world-class Web mail interface, to complement the Smart Email features that deliver complete device-independence.

- MailServe uses internationally recognized mechanisms to deliver the highest levels of malware & junk-mail protection.

- MailServe reports & analytics will help you to ensure that email is used productively in your organization.

MailServe

SmartEmail

Priority Inbox

To make our user-friendly Web mail interface even more productive for your users, this feature segregates email into 'Important' and 'Others' and displays them in a visually separated manner - ensuring that they can work even smarter.

Mobile Inbox

This feature allows your users to filter the mail that they want delivered to their IOS and Android smartphones, while simultaneously ensuring that mail sent from their phones remain in complete sync across all their devices. And we pride ourselves for being the only service providers with this capability!

MailServe

MailPush

- Intended for organizations who need to keep their mail server within their premises – world-class email filtering + a safety-net when connectivity becomes an issue.

- MailPush transparently receives all mail for your domain, and passes them through our tried & trusted scanners and filters to screen out malicious and objectionable content – and lets only relevant messages through to your mail server. Along with a pleasant side-benefit – efficient use of your connectivity.

- In addition, MailPush also maintains a backup of messages for 72-hours after relaying, so in the event of any extended connectivity outage to your mail-server, mail is never ever lost.

MailServe

Authenticated SMTP

- Provide a secure, reliable and ISP-independent route for outgoing messages – across all your locations.

- The Authenticated SMTP relay functionality provides a reliable and secure route for all outgoing messages, across all your company domains, and across all modes of connectivity – and ISPs.

- Create accounts as per your policy requirements, to enable better reporting and monitoring of email usage.

- Exclusion of your ISP's SMTP server from the loop while using Authenticated SMTP from MailServe provides an added level of privacy and security.

- All messages are scanned for malware, malicious and objectionable content – to serve as a second line of defense for your business communications.

MailServe

ChatServe

- A closed-user Instant Messaging platform that enables employees to communicate in real-time. ChatServe records chat history for convenient access to information, along with detailed logs to ensure productivity.

- ChatServe is particularly useful for users across locations to easily and quickly communicate with each other, in situations that require quick turnaround times.

- Since ChatServe can only be accessed by users defined by you, misuse is not possible.

Online SMS Gateway

- Email to SMS – enables sending 152 character SMS alerts/updates to as many as 99 GSM/CDMA recipients. This is useful for all your users who do not carry email-enabled mobile devices.

- Users can receive alerts or the entire body of predefined email over SMS, to let them act immediately.

- The MailServe SMS Gateway also has an intuitive API to let you integrate with applications like your CRM or NMS, to get instant alerts based on your preferences.

MailServe

Web Hosting

- Guaranteed 99.7% website uptime with a watertight SLAs.

- On-demand support for trouble-shooting your installation and configuration needs.

- Daily backups for protection against virus attacks.

- Built-in safeguards against virus, spam, Denial-of-Service attacks and other intrusions.

- Available on both Linux and Windows platform.

MailServe

Smart FTP

- Ensures business continuity – back up business data in the Cloud for protection from unanticipated disasters.

- Eliminates human errors by defining user access permissions.

- Enables document collaboration by facilitating multi-user access to an FTP folder.

- Provides email alerts on changes/updates to data.

- Supports on-demand space expansion.

MailServe

Calendar & Address Sync.

- Mailserve synchronizes your Calendar, Contacts, Tasks & Notes across all devices on a real-time basis, making sure you're up-to-date on your tablets, laptops and IOS & Android mobile devices while you are on the move.

- With complete device-independence, Mailserve sets you free from worrying over losing important data. Even if you lose your handhelds, all your Contacts and Appointments are safe on Mailserve.

- With Mailserve 'Shared Calendar' feature, managers get a quick view on their Team's schedule, ensuring optimum resource utilization.

MailServe

Document Sharing & Collaboration

- The Document Management Service enables sharing and collaboration on documents across multiple users - no more mailing files and tracking multiple versions!

- With all your files stored online, Mailserve makes it easy to store, organize, and share them on desktops, laptops, and IOS & Android mobile devices – ensuring seamless collaboration.

- Users can View, Edit, Delete, Upload, Download, Share and Store their documents anytime, anywhere.

- Users can create functional or project specific groups, share files & folders among these groups and map users outside the group to expand their collaborative network.

MailServe

What Can I Take Away?
